

A FROG'S LIFE

Match each picture to the correct words to learn about the development of a frog. Then circle jobs at the bottom of the page that might work with frogs.

12 Weeks: It now looks like a frog, but still had a stubby tail.

The female lays eggs in the spring. A group of fertilized eggs is called spawn.

Tadpole 7-10 Days. They begin to swim and feed on algae.

6-9 Weeks: Legs and arms begin to grow. They eat insects.

20 Weeks: The frog is fully grown and spends most of its time out of water. Frogs live between 4-15 years.

4 Weeks: Skin grows over the gills. Little teeth appear. A coiled gut develops to help digest food.
